

DATA IN PRACTICE

The power of big data in transforming the society

WHAT WE DO

Importance of data

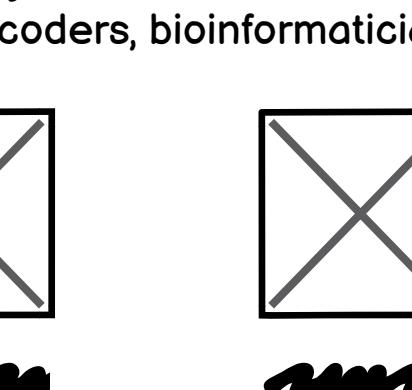

The digital age has brought about vast amount of data that can be mined, analyzed, understood and utilized to transform our society. The power of big data analytics can be used to inform government policies, fight climate change, hunger, diseases and to improve student performance in schools as well as boost profits of businesses. However, most organizations in Africa are yet to tap the benefits that emanate from this data revolution.

So...what exactly is our role in all this?

- Utilize big data analytics to guide policy implementation by national and county governments
- Research on new methods to analyze data and discover new knowledge
- Collaborate with organizations to provide solutions for their pressing business and operational needs
- Help teachers, students and professionals to incorporate data analytics into their current skillset
- Promote cloud-based big data storage and analytics

Harnessing the untapped potential of big data to ultimately transform the society that we live in

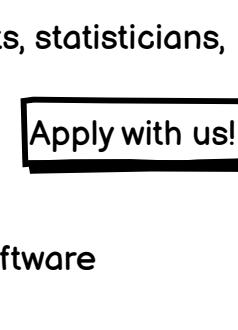

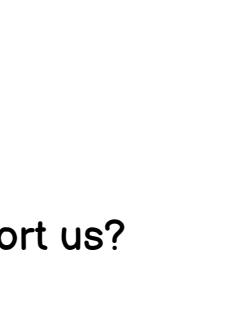

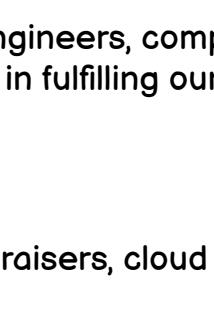

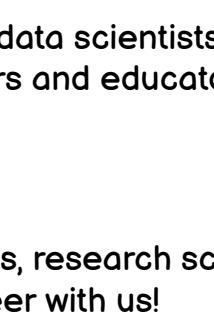

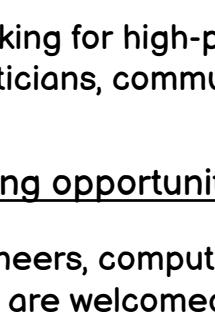

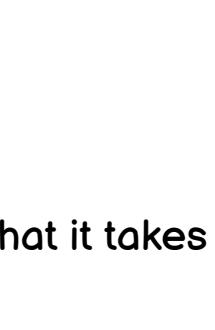

OUR WORK

more

MEET THE TEAM

We're headquartered in Nairobi, Kenya. A team of multidisciplinary, global talent composed of statisticians, computer scientists, coders, bioinformaticians and community workers.

GET INVOLVED

Have what it takes to join our team? Or are you looking for ways to support us?

Careers

We are looking for high-performing data scientists, software engineers, computer scientists, statisticians, bioinformaticians, community workers and educators to join us in fulfilling our mission!

[Apply with us!](#)

Volunteering opportunities

Data engineers, computer scientists, research scientists, fundraisers, cloud engineers, software engineers are welcomed to volunteer with us!
